

Kaushik Prajapati

SENIOR SOFTWARE ENGINEER | BACKEND
ENGINEERING | PHP & SYMFONY

PROFESSIONAL SUMMARY

Senior Software Engineer specializing in backend engineering, PHP, and Symfony, with extensive experience building, evolving, and modernizing web applications and backend systems. I have worked with Dutch organization and international teams, delivering reliable software for production environments. My experience includes backend development, APIs, software architecture, system integration, and microservices-based solutions.

I am strong at understanding complex and legacy codebases, designing maintainable solutions, and solving challenging technical problems with a pragmatic approach. I focus on scalability, maintainability, reliability, and continuous improvement, while staying current with modern technologies. I am particularly interested in applying AI and LLMs to build practical, user-focused solutions that solve real-world problems.

SKILLS

Technologies

Web applications, REST APIs, SaaS modules, system integrations,

Programming Languages

PHP, JavaScript

Currently Learning: Python, Go

Frameworks/Cms

Symfony, Silex, Zend Framework, GraphQL, WordPress, Drupal

Template Engine

Smarty, Twig

Database/RDBMS

MySQL, SQLite, Elasticsearch, MariaDB

Operating Systems

Windows, Linux, Ubuntu

Integration Tools

Git, GitHub, Bitbucket

Development Tools

Cursor, VS Code, Docker, GitHub Actions (CI/CD)

- ★ -

EDUCATION

MCA from Indira Gandhi National University (IGNOU) India

BCOM from Gujarat University India.

SELECTED PROJECT EXPERIENCE

LinkORB Engineering

Site URL: <http://engineering.linkorb.com>, <https://www.zwangerenportaal.nl>, <https://www.perinatologie.nl>

Project Brief

LinkORB Engineering is the sub-group of LinkORB focused on the development and operations of our products and platforms: innovative healthcare solutions for healthcare professionals and their patients.

Role

Core developer on LinkORB products, including ZwangerenPortaal.nl, the leading patient portal in the Netherlands, used by over 2.5 million new parents. Most of the work is on live systems that people already depend on: backend services, APIs, and integrations in a microservices-style architecture. Contribute to design and delivery of core platform features, connect and adapt existing systems, and migrate legacy parts to a more maintainable PHP/Symfony architecture without stopping the product.

- ★ -

Biller

Site URL: <http://inqonto.com/>

Project Brief

Biller/Inqonto — Developed a modular billing platform supporting invoice generation, recurring billing, reminders, timesheets, and role-based access. Integrated PDF generation and implemented VAT/tax calculation functionality.

Role

I have work with both side backend as well as frontend. I had joined this project as a developer. Developed modular base project structure. Integrate library.

Key Challenges and Results

We have integrate library for generate PDF base on generate bill. Print bill format envelop letter. VAT and Tax calculation.
